⨁Symantec.

Eliminate multiple islands of DLP & reduce overhead

Leverage existing policies and workflows crafted with Symantec DLP to seamlessly extend protection to content in the cloud. Reduce administrative overhead with a single management console for all your DLP requirements.

Optimize performance

Symantec's industry leading DLP detection technology is now offered as a cloud service, ensuring optimal performance for classifying content being uploaded or stored in the cloud. When seamlessly integrated with Symantec's CASB solution, the combined solution enables rich policy actions, and eliminates inefficiencies incurred when shuttling content between the cloud and on-prem hardware.

Gain granular CASB visibility and controls

Symantec DLP customers also gain insights and controls enabled by the Symantec CASB solution. The combined solution delivers detailed visibility of user activity in the cloud, alerts to risky behavior, and controls to prevent inappropriate sharing of sensitive content.
